

Block Shredder

➤Product: Cheese, butter, copha, etc. ➤capacity: 20 kilo block in 30 seconds.

Machine Description:

The block (or off cuts) are placed in the loading station. The start button is pressed which will automatically close the polycarbonate lid. When the lid is fully closed, the shredding disc will begin to rotate and the pneumatic ram will begin feeding the block through the pre-cutting grid and into the already rotating shredding disc. Shredded product is discharged from the front end and any lumps generated will be discharged to the rear

of the cutting disc. At the end of its stroke the ram will automatically retract and the shredding disc will stop. Once completely retracted, the loading door will automatically re-open for the next block.

Machine can be supplied with inverter to adjust speed to allow for fine grating of parmesan.

All covers and guards have safety magnetic switches fitted. Stainless steel construction with glass bead finish.
