

Cutting

Cluster cutter for beans

➤Capacity: 3 tonne per hours ➤Product: carrots, beans

Machine Description:

Beans travel through the inside of a rotating drum, mounted on a slight decline, on 4 trunnions offering a smooth and quiet running.

Hooks and knives placed on the inner radius of the drum, pick up bean clusters and force them through striker plates situated above the

product flow, cutting the clusters.

Loose beans will travel between the hooks and out through the discharge chute.

Knives are heat treated for long life. Machine is of stainless steel and food grade materials to food industry and safety standards.
