

# Elevating

## Side pocket elevator

➤ Capacity: up to 15,000 ltr/h

➤ Product: cut fresh or frozen vegetables,

### Machine Description:

Product is collected from the hopper at the base of the machine by a cleated belt laying on its side in a trough to form pockets.

The product is carried in these 'pockets' to the discharge point at the uppermost height of the elevator and discharged at the end of the trough into the discharge hopper.

This method allows for up to 50° incline or long elevation as the product is completely contained thus eliminating spillage.

Made from stainless steel and food grade solid polyester belt, the construction will prove to be low maintenance with a long life and is quiet in operation.
