

# Pumpkin segmenter

- Capacity: 1200 kg per hour approx.
- Products; Whole pumpkin, max dia. 400 mm x 300 mm high

## Machine Description:

This machine is designed to cut pumpkin into segments.

The operator places the pumpkin on the cutting disc and presses the start button. The guard doors travel downward until fully closed. The knives will then be pushed downward slicing through the pumpkin completely.

The knives then retract upward, the locking device on the hinged gate beneath the pumpkin disengages and allows the gate to open and the

pumpkin segments to fall onto the discharge conveyor below to be conveyed away.

The hinged gate closes and the door opens allowing for the next cutting cycle.

All covers and guards have safety pneumatic interlocks fitted.

Made from stainless steel and food grade plastics to ensure a long trouble free life.

Other pumpkin processing equipment is available—please ask for brochures.
